Technical Innovation Names Barry Halligan to Lead New Technical Operations Group

NORCROSS, GA, October 27, 2005 — Technical Innovation announced today that Barry Halligan has been named executive director of technical operations for the company's Integrated Systems Group. In this newly created position, Halligan will direct the activities of the Integrated Systems Group's service, field operations and engineering organizations.

An industry veteran with more than 25 years in audiovisual and video manufacturing and dealer companies, most recently Halligan was director of service operations for Technical Innovation. During his tenure in that position, the focus of the service organization moved from a repair-oriented to a holistic support approach, and revenue from service operations grew significantly.

"The efficiency created by uniting installation, engineering and customer service under a single umbrella will enhance our ability to support customers as their needs change and their systems become more complex," said Kevin Powers, Technical Innovation managing principal. "We are very fortunate that the right person to lead this organization is already in our company. I am confident that Barry will build a strong, cohesive technical operations group that will provide our customers with the world-class support they have come to expect from Technical Innovation."

Halligan, a long-time resident of the Atlanta area, holds an AS in Electronic Engineering Technology from DeKalb College.
