Technical Innovation Opens PolyVision Thunder™ Showroom Site

NORCROSS, Ga., November 16, 2006 – Technical Innovation today announced the opening of their PolyVision Thunder™ Showroom Site. The Thunder Virtual FlipChart™ system, the next process of interactive communications and collaboration, enhances idea and information exchange, interaction and sharing in virtually any setting – universities, manufacturing, architectural and engineering firms, corporations, healthcare organizations or any enterprise that benefits from collaboration among people in multiple locations.

Thunder provides a number of clear benefits for its users, including reduced costs associated with down time and travel, shorter decision cycle times and true interaction and collaboration regardless of participants' locations or media. With Thunder, meetings and work sessions can resume at any time, recalling all of the proceedings electronically exactly as they were presented originally. Thunder simplifies building on previous ideas and helps move organizations toward best practice processes for more efficient, more profitable performance.

PolyVision introduced Thunder to the marketplace in late 2005, employing a unique market and channel strategy. Recognizing the need for customers to experience the Thunder system, PolyVision established an aggressive schedule for Thunder showroom site implementation in conjunction with forming an innovative partnership with Technical Innovation, one of the seven authorized regional Thunder integrators selected throughout the United States.

Mike Dunn, CEO and President of PolyVision, stated, "The explosive growth in channel and customer demand experienced by PolyVision has resulted in our accelerated launch of Thunder showroom sites across the country. We are very excited about the opening of the Technical Innovation Thunder Showroom site in the metro Atlanta area."

The Technical Innovation Thunder Showroom takes advantage of additional technologies that make the room both easier to use and more efficient. Among them is the RoomWizard room scheduling appliance, also from PolyVision, a system of signs mounted outside meeting spaces and all connected and accessible from any device on a network. Each RoomWizard display provides a variety of easy-to-understand information including scheduled meeting times, in-room technology, hosts, topics, upcoming events, and more. RoomWizard also interfaces to Thunder for one-click publishing of PDF files

(more)

of captured event proceedings to all registered guests, including those who were not able to attend.

“Technical Innovation is very pleased to be able to offer this opportunity for our customers to experience Thunder in a live, interactive environment,” said Kevin Powers, Technical Innovation Managing Partner. “I believe Thunder is the most exciting collaborative meeting technology that I have seen in over twenty years in this industry.”

ABOUT THUNDER™ VIRTUAL FLIPCHART™ SYSTEM

Thunder Virtual Flipchart System is the new generation of collaboration. With Thunder, organizations can experience an entirely new dimension of collaboration for groups and teams in which any data and information, in any format, can be communicated, stored, displayed, and organized – all captured on an unlimited, shared group canvas in real time. Teams can connect from anywhere in the world through Thunder, reducing the need for excess travel. The system is simple and intuitive to use, allowing teams to work the way they are used to working.
